OFFSHORE LONGLEADER FISHERY

2018

The **Offshore Longleader Fishery** is a new fishing opportunity to target midwater rockfish, outside of the <u>40 fathom regulatory line</u> and with longleader gear only.

The gear required consists of a fishing line and tackle configuration with a <u>minimum of 30 feet</u> of line between the terminal weight (sinker) and the lowest hook, and a <u>non-compressible float</u> affixed above the top hook. Lures must be less than 5" in length, and natural bait is prohibited.

Longleader gear schematic (not to scale)

Supplies to make a longleader gear rig:

- Two swivels (one above the float and one below the bottom hook)
- One non-compressible float (for example, rigid plastic or cork; <u>not</u> Styrofoam) above the top hook that has sufficient buoyancy to support all hooking gear and line above the leader
- Up to three shrimp flies or artificial worms (below the non-compressible float and above the lower swivel). <u>Bait is not allowed</u>
- A weight (sinker), size dependent on the drift, current, and ocean conditions
- A minimum of 30 feet of line between the lower swivel and weight

Frequently Asked Questions

What is the Offshore Longleader Fishery?

• It is a new opportunity, using longleader gear (described on reverse) to target offshore midwater rockfish species while avoiding bottom-dwelling species such as yelloweye rockfish

When and where is the Offshore Longleader Fishery allowed?

- It is allowed outside the <u>40 fathom regulatory line</u> only
- Available year-round

Photo of longleader gear ready to be deployed

- Yellow circle shows the non-compressible float above the lures.
- Red circles show three shrimp flies.
- The white bucket in this photo was used to contain the weight and 30' of leader below the lures; it is not required. Anglers may use different methods of wrapping/containing the gear.

What is the bag limit when participating in the Offshore Longleader Fishery?

- The 2018 bag limit when participating in the Offshore Longleader Fishery (using longleader gear outside of 40 fathoms) is <u>10 fish in total per angler</u>.
- <u>The only species allowed are</u>: <u>yellowtail</u>, <u>widow</u>, <u>canary</u>, <u>greenstriped</u>, <u>redstripe</u>, <u>bocaccio</u>, <u>chilipepper</u>, and <u>silvergray</u> rockfishes. (For more fish ID, see <u>http://www.dfw.state.or.us/MRP/FishID/index.asp</u>)

Can I fish for lingcod/flatfish/other bottomfish on the same trip as offshore longleader rockfish?

- <u>No</u>. Lingcod, flatfish, or other bottomfish are not allowed onboard at the same time.
- Anglers may return to shore, offload all rockfish, and fish for lingcod or flatfish on a separate trip.
- Bottomfish listed under the general marine species daily bag limit (black rockfish, deacon rockfish, kelp greenling, etc.) may be kept on a separate trip on the same day <u>only if fewer than 10 fish were kept on the offshore longleader trip</u>. In that case, anglers may keep up to the general marine fish bag limit of 5 on a separate bottomfish trip, but may total <u>no more than 10 general marine species per day</u>.

Can I combine any other <u>non-bottomfish</u> fishing with offshore longleader fishing on one trip?

• <u>Yes</u>. Tuna, crab, and salmon may be combined with offshore longleader trips, as long as all gear/ species/area rules are followed – for example, once salmon are onboard, barbless hooks must be used; and you may not fish in an area closed for any species you have onboard.

What about halibut on the same trip?

- <u>No</u>. An offshore longleader trip cannot be combined with halibut.
- Anglers may return to shore, offload all rockfish, and fish for Pacific halibut <u>on a separate trip</u>, in areas and times that halibut is open.

Regulations can change – check <u>http://www.dfw.state.or.us/MRP/finfish/groundfish_sport/index.asp</u> before fishing.
