Note: Numbers not final; collection pond tally only

\*Marked fish are hatchery fish with a clipped adipose fin. CRH strives to mark 100% of its smolt production annually.

\*\*Recaptured fish not included in daily or season totals. Recaptured fish are fish that have been recycled downstream and returned to the hatchery.

***Angler Enhancement (Fish Recycling Program)***

**LAST DATE RECYCLED** 6/30/2023

**TODAY'S SITE:** Gold Hill

These fish are given an operculum (gill plate) hole punch mark when they first arrive to hatchery, then they are recycled downstream. Recycled fish are trucked from the hatchery downstream to a boat ramp for anglers to have another chance at catching these hatchery fish. Location chosen is typically based on river temperature to reduce stress on the fish.
