

# RESTORE

**Plant streamside vegetation, build bird nesting boxes, monitor and help boost fish and wildlife populations.**

**In many areas, human activity has created severe challenges for fish and wildlife species. Overfishing, degraded habitats, the introduction of invasive species – all make it harder for native creatures to survive and thrive. As an ODFW volunteer, you can help us restore these native landscapes and re-establish natural processes by restoring fish populations and managing healthy wild and game animal populations. Pitch in and help us leave Oregon a better place than we found it.**

- Gardeners, hikers and other people who like to work with their hands and be outdoors will enjoy this work. An appreciation of nature and wildlife is a definite plus, as is a willingness to help ODFW biologists restore the woods, fields and waters that offer critical habitat to Oregon's native species.
- Volunteers on restoration projects may work inside preparing for projects, or outside where most of the restoration work occurs.
- Fully vetted Volunteers even take fish eggs into classrooms where they are raised by students and released into a nearby waterway. Training is provided for most ODFW Volunteer Opportunities.
